

Product Overview

Product: PrintCALC <http://www.printcalc.net/printcalc/>
Company: Made4Print Limited www.made4print.com

Summary:

PrintCALC is a software application that accurately reports on the colour coverage within a print-ready PDF document. Percentage of CMYK and spot colours are supported, calculated and displayed per separation, per page or per document.

Detailed Description:

PrintCALC is an online software application that accurately reports on the colour coverage within a print-ready PDF document. Percentage of CMYK and spot colours are supported, calculated and displayed per separation, per page or per document. A document report history is saved for future reference.

Individual colour separations can be viewed giving a visual representation of coverage across the pages.

Benefits include:

- Helps calculate ink and toner coverage for printing, allowing estimators to quote more accurately on both large format inkjet and traditional long-run jobs.
- The number of colours can be verified when quoted by an estimator.
- Estimators don't need to utilise production staff or machinery to run these types of reports for estimating.
